

PRODOTTO:
Tecton

BRAND:
Zumtobel

For **Nicholas Grimshaw & Partners**, appropriate design is mainly an expression of pure functionality. The unobtrusive look and slim line of the TECTON continuous-row lighting system ensure an appearance of aesthetic merits which keeps many application options open. A well-thought-out design with various optics and louvres guarantees perfect adaptability.

In terms of technology, TECTON is clearly orientated towards the future. It is the first system to continuously integrate **power** and **data cables**, thus supporting all forms of electronically controlled lighting solutions. The system combines five outlets for mains power supply, four poles for two independent emergency lighting circuits, and two control lines with DALI control signals for brightness control. Installation on site is easy and does not require any tools.

Combined with the PROTON spotlight system, TECTON becomes **PROTON TEC** - the perfect choice for applications in presentation and retail areas. The flexible PROTON spotlights can be positioned at any point of the TECTON system. For retail areas, the TECTON range is completed by one- or two-sided RSR shelf lighting optics.
